

# Security of Funds

# Our client's Fund's security is our Top Priority

Here at LDN Global Markets, we fully understand that successful traders have to focus all their attention on their trading rather than worrying about the safety of their funds. For this reason, we have taken additional measures to ensure adequate levels of safety for your funds.

The LDN Global Markets brand has become a global leader in online trading, specializing in forex, CFDs, stocks, commodities, spot metals, and indices. Our Client fund security has been a part of our philosophy and DNA alongside unmatched trading conditions and customer support. With global recognition for excellence, a solid reputation, and multi-award-winning services, our clients are and will always rest assured that their funds are held securely.

Clients' funds are received into bank accounts separate from the company's. These funds are off the balance sheet and cannot be used to pay back creditors in the unlikely event of a default of the Company.

## Negative balance protection

Volatility often happens in the financial markets. The negative balance protection of LDN Global Markets' policy means that even in the event of highly volatile conditions when margin calls and stop-outs do not function correctly for some technical or mostly market conditions reasons, no client is responsible for paying back a negative balance.

## Risk management Security of Funds

LDN Global Markets monitors continually, identifies, and assesses all possible types of risk associated with its operations. i.e., assessing on a continuous basis the effectiveness of the policies, arrangements, and procedures in place and its implementations which allows us to easily be able to cover the financial needs and capital requirements at any given time.
